

Attention EvCC Nursing Students--Coming Summer 2023

Principles of Phlebotomy for Nursing

Health Sciences is partnering with the Nursing program to offer a special 4- credit Phlebotomy class exclusively for EvCC Nursing Students.

Learning Objectives:

1. Evaluate the venipuncture processes to obtain venous blood samples utilizing:
a) evacuated blood collecting systems,
b) syringes, and c) capillary punctures.
2. Discuss blood specimen handling, processing, preanalytical errors, and transportation.
3. Evaluate quality control practices to ensure specimen integrity.
4. Evaluate documentation requirements for venipuncture procedures.

Here is what our Nursing students are saying about this course

*I appreciate the extra confidence this class provided in performing venipuncture procedures.

*GREAT experience. This class was totally worth the time because you'll build so much confidence in finding veins and drawing blood.

*Drawing blood is so much more than just the procedure, and I had no idea until taking this course.

*Take it! You won't get this level of technical hands-on experience on the job. Beyond blood draws, the skills you learn will carry over into other nursing skills such as IV starts and finding veins.

*I love the emphasis on using all of our time in lab, getting as much hands-on experience as possible!

Exciting Opportunity!
If you have completed NURS 120, this class is for you.

40 hours of clinical lab time on campus
20 hours of online didactic instruction

Learn which tubes to use for various tests

How to select veins
The correct Order of Draw

Class capacity: 15 students

Labs are mandatory and will run each

Monday 9 am-1pm
July 3rd -August 24th 2023

Instructor permission required
